## DETAILED ACTION

### *Election/Restrictions*

Election of species should be required prior to a search on the merits in all applications containing both species claims and generic or Markush claims.(MPEP 808.01(a))

Claim 1 is generic to a plurality of disclosed patentably distinct species of copolymers comprising monomers (a), (b), (c), (d) and (e) in the claimed formulation that require a burdensome classification, and/or bibliographic, manual and computer search. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species (i.e., a single monomer) from each of components (a), (b), (c), (d) and (e) to form a copolymer, even though the requirement is traversed. Applicant should include a chemical structure of the elected copolymer if not already contained in the specification.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species

to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
